DESIGN PHILOSOPHY, WHAT INSPIRED US?

“UandKSound was conceived as a result of my inspiration to create new masterpieces”

Chief Design Officer

What makes us different?

There are many companies manufacturing great loudspeakers, but UandKSound is the sole company designing and manufacturing an innovative line of high-end cinema and custom loudspeakers, among others. We don't follow the same design philosophy that our competitors adopt, rather, offer individual, unique solutions addressing the challenge of seamlessly integrating high-quality sound into the living environment.

UandKSound products are virtually perfect for any application, such that you do not have to settle for an inferior listening experience.

Even the best reference loudspeakers will not deliver uncompromised satisfaction unless the system is properly conceived, designed, installed, and calibrated. For this reason, UandKSound only partners with qualified distributors worldwide, many of whom are CEDIA members, offering exemplary factory support. You can be assured that your investment into UandKSound will provide the most inspiring sound for years without compromise.

Sound architects of your dreams

UandKSound products are recognised worldwide due to the quality of production and the loyalty of the most discerning audiophiles and interior designers.

An extended experience in working with the best engineers and designers allows us to offer the bespoke quality. Each product represents refinement and acoustic excellence individually customised for each installation.

Our factory only employs skilled and well-trained engineers to test every component carefully. Extensive listening tests are a crucial part of the manufacturing process.

You imagine it, we make it reality

All UandKSound products are conceived to be an integral part of the environment because of their elegant construction. The best loudspeakers come from a heritage of the most advanced studies to create the most discerning sound experience, blending into your interior design.

Each of our masterpieces are designed to be adapted to the technical specifications and requirements of the installation. In this in mind, UandKSound offers a wide range of in-wall, on-wall, and free-standing configurations to achieve the maximum performance.

Only settle for the best! UandKSound is by far the best option to enjoy the most impressive sound for years without having to think about anything else to enjoy.

WHY DO GLOBAL CONSUMERS CHOOSE UANDKSOUND?

UandKSound meets all consumers' needs

UandKSound covers all the cinematic requirements of different scenes. Whether a large space, or small, there are application-specific products to meet user needs such as a simple family room surround sound, independent home cinema or professional recording studio. Today we are also bringing you the latest products for commercial spaces. Accommodating both sound authenticity and design style, the UandKSound mantra is to awaken your senses.

Uandksound insists on using the world's best quality speaker unit

As we all know, the core component of the speaker is the speaker unit, and UandKSound insists on using the world's most elite high-fidelity drivers with an air-cushioned tweeters and mid-bass units utilising an oversized magnetic coil to manage high power current, for optimum bass performance. Not only do these factors provide the best sound performance, but the highest quality among many brands.

UandKSound speakers can only be pur- chased from the best and most professional custom installers

Anyone can buy good audio-visual equipment, but it does not mean that you can get audio-visual effects that match their worth. How to integrate the equipment into the home, how to achieve the best sound effect, ensure a seamless home design, and complete the installation and commissioning of the equipment are skills requiring training. UandKSound's global sales channel consists exclusively of professionally trained and experienced A/V integrators. Consistently, our regional distribution partners are the most professional and qualified in the industry. We expect our consumers to receive the best experience when using UandKSound audio systems, so we only supply to the best custom installation partners for system deployment, setup, calibration, and after-sale support.

Meet Uandksound

UandKSound supports every corner of the world from its birthplace in Europe. UandKSound products are favoured by consumers everywhere. Since its establishment, UandKSound has been committed to the latest technology and design to manufacture high-end speakers. All the products are manufactured under the highest quality standards and are comparable to the sound quality expected of high-fidelity speakers, with a minimalistic design, which allows them to be integrated into the home environment without any barriers.

EU environmental specifications materials

UandKSound maintains very stringent requirements for environmental protection. All UandKSound products meet or exceed ROHS standards. These standards were implemented in July of 2006, and are mainly intended to regulate the material and process standards of electrical and electronic products, making them more conducive to human health and environmental protection. The purpose of this standard is to eliminate six substances including lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls and polybrominated diphenyl ethers in electrical and electronic products and emphasises that the content of cadmium does not exceed 0.01%.

The best choice speaker material

Medium density fibreboard (MDF) is a board with plant fibres as raw materials, applied with urea-formaldehyde resin or other synthetic resins, and pressed under heating and pressure conditions with a density in the range of 0.50 to 0.88 g/cm³.

1. The internal structure is uniform, the density is moderate, the dimensional stability is good, and the deformation is small.
2. The physical and mechanical properties such as static bending strength, internal bonding strength, elastic modulus, board surface and board edge screw holding force are the best speaker materials.
3. The internal damping coefficient is the best material suitable for speakers among all materials. The speakers can restore music to get the best performance.

INTERNATIONAL MARKETS AND DISTRIBUTORS

Like any other important brand, UandKSound is present in different international markets. Historically, our main market was Asia, specifically China and India, where the number of official distributors amounts to 133, of which, 53 are exclusively dedicated to the installation and design of residential cinemas. However, in UandKSound has been building a presence in Europe for some time and a new entity was created in 2020 to meet the needs of the European consumer. In the same way UandKSound is working in other areas of the world such as the USA and Australia to publicise its innovative and attractive products. With a firm goal of moving forward successfully, UandKSound only cooperates with the most specialised distributors and sales agents.

EUROPEAN BRANCH AND FACILITIES

Since 2015, UandKSound has been committed to offering the best service around the world. Thus, in 2020, a new division of the brand was incorporated in Europe with its base in Spain, to provide commercial, technical, and logistical service more effectively to new clients. We know that distance sometimes represents an inconvenience for carrying out commercial transactions due to high logistics costs. Today we can say that the future business development in the European market remains positive.

The UandKSound European headquarters in Malaga, Spain provides a turnkey facility for logistical services, technical advice, and showroom visitation. At this facility clients can experience first-hand, all the products in person. Additionally, an exclusively equipped cinema room with immersive sound and award-winning, Reference Series speakers is available for the discerning consumer to experience. Among others, we also showcase StormAudio AV processors, a newly associated partner to UandKSound for the local Spanish market facilitating premium packages by UandKSound & StormAudio.

SALES SERVICE

Technical advice and world-class customer service are of paramount importance to UandKSound. For this reason, the manufacturer offers project design services to all its distributors, if the necessary technical documentation is provided. All UandKSound product images and schematics are available in .DWG format upon request and can be used by architects, consultants, and technicians to design and specify projects. Support is available quickly and efficiently via telephone, email, or videoconference. Guided visits to the UandKSound factory are also proposed to distributors who want to learn more about the UandKSound experience.

DEALERS TRAINING PROGRAMS

UandKSound consistently thrives to provide best practices to all its dealers in conjunction with advice on the best tools to properly design and calibrate the private home theatre. Dedicated training programs are available in the following subjects:

1. Design of cinema renderings
2. Professional theatre design
3. A/V design knowledge and the latest audio technology application training
4. Professional process management and debugging technology training
5. New media operation training
6. Marketing training
7. Management training

If you want to participate, please inform us and we will schedule the best time and location.

14,459 €
(Stormaudio processor)

from 5,408 €
(amplifier)

The authentic "home cinema"

SG AV-Technology is the distributor of uandksound and electronic boxes Stormaudio: we put them to the test in their new movie theater

Some time ago we tested speakers from uandksound, and a little over a year ago we had the opportunity to compare their complete range at the facilities of their delegation for Europe: SG-AV Technology from Manika (Malaga), the exclusive national distributor of uandksound and brand's distribution center in Europe (now its largest market). We have visited them again to check the evolution of their stores but above all to try their new movie theater, which as we will see was more than worth the visit.

SG-AV Technology cinema room: speakers

The new SG-AV Technology room (by the way the acronym is due to its owners, José Luis Salazar and Natalia Galera) mounts a uandksound Reference "top" front set combined with M6 series effects boxes on both sides and rear and also vertical (ceiling). It is a 9.2.4 set (nine surround channels plus two subwoofers and four Atmos-type ceiling), whose "brain" is the Stormaudio ISP Core 16 processor and which obtains "muscle" from several uandksound multichannel stages. A JVC projector (the LX-NZ3) completes the audiovisual part and a home automation system controls everything, including lighting (with a beautiful "starry sky" effect on the ceiling). The room is compact and slightly rectangular: 5 by 4.5m, just over 20 square meters, demonstrating that a large room is not necessary to enjoy an authentic home cinema.

If we analyze the boxes in detail, the front uandksound Reference set is the brand's greatest exponent with three M1200LCR boxes and two M1800SW bass drawers. The first ones, as their name indicates, work as the main L, C and R (left, center and right), and are placed with the two bass boxes interspersed, forming a solid front set of five boxes (say the "3.2" part of the system). The M1200LCR have a horn tweeter and a 12" mid-woofer, while the dedicated M1800SW bass boxes mount a huge 18" driver. All cones are made of treated paper, which offers a touch of warmth and helps maintain a family feel. In the LCR two switches allow you to adapt its response in treble and

TECHNICAL DATA

TYPE: Cinema room with passive speakers and uandksound amplification, Stormaudio processor and JVC projector.

UANDKSOUND SPEAKERS: REFERENCE SERIES 3 front M1200LCR units (4,341 euros) plus two M1800SW passive bass drawers (3,855 euros). Cinema Series: 6 units M610W (1,619 euros) for side and rear effects plus 4 units M500W (1,051 euros) for ceiling effects.

PROCESSOR: STORMAUDIO ISP CORE 16 (14,459 euros) with Dirac ART correction system, 7 HDMI inputs and 2 outputs, SPDIF digital and RCA analog inputs, remote for 16 balanced XLR analog channels.

UANDKSOUND AMPLIFICATION: 3 M1800W stages (4,400 euros) of 750 W per channel in class D, plus 1 M2900 stage (7,021 euros) of 300 W per channel in class AB.

THE AUTHENTIC "HOME CINEMA"

Thanks to its role as exclusive distributor of uandksound, SG-AV Technology is also a distributor of Stormaudio in bundles with uandksound boxes. Stormaudio is a French manufacturer that is currently considered "top" in the world of multichannel sound and from its close collaboration with the room correction specialist Dirac it is worth saying that they are the only ones that offer the latest from the Swedes: the Dirac ART system (by Active Room Treatment), whose operation we were able to see firsthand (spoiler: outstanding).

Specifically, we had the Stormaudio ISP Core 16, which as its name indicates has up to 16 fully configurable analog outputs, of which we use 15 in this system that I have already described before as 9.2.4. Something very interesting is that if we had a slightly smaller cinema room (say 7.2.2 or 11 channels) we could dedicate the other 5 channels to an independent equipment in another room (for example a 2.2 stereo), and use Dirac correction independent for that room.

This simple-looking but brutally capable processor allows you to

decode any immersive sound format (Auro-3D, Dolby Atmos, DTS:X Pro, IMAX Enhanced) and apply Dirac correction in any type of configuration, up to four-way active boxes or any number of bass drawers. It can be controlled from its screen (in our case not visible, mounted on an external rack) or better via a dedicated application (very elaborate and understandable) with which it is possible to touch parameters "on the fly" and instantly appreciate its effects. The power stages used, the "muscle" that I mentioned above, were made up of three uandksound M45000 stages (4 channels of 750 watts in Class D each) and one uandksound M7300 (7 channels of 300 watts in class AB).

A "cinema" room

Two things remain as clear conclusions from this listening: first, the good synergy between the uandksound boxes (ideal for installations) and the powerful Stormaudio electronics. Second, the importance of a correction system like the Dirac ART, which represents a notable acoustic leap in a system of this type and I dare say that even more so when the room is not as prepared or worked on as is this case. (with well camouflaged acoustic panels and other measures).

I like to start the auditions with music before moving on to the film cuts, to listen, and also going from calm acoustic music to something more upbeat, and then with video of voices or also soft soundtracks to more effective things. But from the outset the power of Stormaudio with Dirac ART was clear to me: this system goes one step further and uses all the boxes to correct the acoustics, canceling, for example, with boxes that do not use unwanted effects from others. It takes into account the entire system (here 9.2.4) as "one" and applies the unified correction, not box by box. In fact, Dirac states that with ART, "passive" acoustic treatments (panels and so on) are less necessary.

In practice, as I said, it was like this: whether a soprano with a harp or a chamber ensemble with a solo violin, sounded with much more realistic, more defined timbres, with ART activated... it was music but it sounded like a movie! With songs that were more generous in bass (Eric Clapton "Rivers of Tears" for example) the frequency control was notable in favor of the ART. And activating a "matrix" with stereo music to listen to it in a channel (which usually makes you want to remove it right away) was not annoying at all, but subtle and pleasant by adding some atmosphere.

Already with movies, from the beautiful song Never Enough (from "The Greatest Showman") to the tank combat scenes of "Fury" or the crazy opening race of "Ready Player One", the Stormaudio keeps the system under exquisite control to offer a great acoustic show. He even managed to move me with the song Shallow from "A Star is Born", despite how many times I have heard it, and with that I say it all.

CINEMA SERIES

Reference Speakers

Designed for success

The culmination of the most innovative design is presented with Reference Series, the result of a long technical research project in collaboration with expert sound engineers from the film industry. Only they, really know the intended audio experience in any given movie. Our challenge is to reproduce and deliver that experience to your home as perfectly as possible. Thanks to the wisdom of our engineers and technical components of the highest quality, this is made possible.

We start by referring to the loudspeakers' high-density enclosure for which we have obtained an improved dynamic performance that translates into an extended frequency response to meet THX standards.

The powerful woofer equipped with an oversized magnet is the key element of the bass unit to bring exceptional impact to the most demanding recordings.

Sound architects

It is not easy to find a design that identifies us, but we do not like to be the same as the competition. All our loudspeakers have been created to be an integral part of the home decoration. This has been so, since UandKSound was born, with the aim of reliving the experience of feeling like one more protagonist of the seventh art, hand in hand with the best sound experience. Commercial movie theatres have undergone continuous technical improvement in recent years in conjunction with recording media. However, there is no doubt that everything can be improved and that is where UandKSound is positioned.

Since 2018, we have designed high-performance loudspeakers such as the successful M6 series, which is easily integrated into all kinds of environment and interior decoration. However, in our quest to seek perfection and integrate the best technology, design, and quality, we have advanced one step further in perfection.

For us, perfection can only be defined in one way; 'reference', recognised as the example by which others follow, in their quest to be the best. Having our own identity is achieved through the most advanced designs developed jointly with the greatest integration experts.

The horn tweeter configuration in the same plane presents a more precise sound directionality to locate the sound scene in greater detail, both in the main channels as well as in the effects channels. The Reference Series modular configuration has been developed to allow easy placement behind large projection screens. In this regard, greater compatibility with all room environments is critical for the most advanced audio-visual engineers.

"UandKSound engineers have tried many high-end speakers over the years, they all sounded good, but UandKSound Reference Series are different from the rest because allow UandKSound customers to focus on what really matters, the sound"

Every corner, curve and detail of the loudspeaker is meticulously studied to combine the pieces of the UandKSound DNA with one another in harmony and colour. Perfection and elegance are the hallmarks that make it a benchmark for other brands that work on a unique and unrepeatably design.

CINEMA
SERIES

M8 Speakers

State of art redefined

After intensive studies UandKSound has implemented a fresh step to renew its flagship reference models. As previous, M8 Series components are carefully selected and only those conforming to tightly defined tolerances are ultimately used. The same care and attention is dedicated to the production of the crossover network which, along with the loudspeakers, is of fundamental importance to the quality of the diffusers.

All models are three-way design. Its separate low, medium, and treble use a 12dB/OCT divider, thus making the sound more clean and more precise in positioning, thanks to the newly developed tweeter. Some UandKSound tweeters now use Air Motion Transformer Technology to make the sound 'leap' forward. A new extra slim body cabinet for M850-N is redesigned to be adapted to any custom installation. With care we have selected our components and, by using high quality speaker units, achieved a more expressive sound.

The power of the new M1500-N subwoofer has been improved. With its unique 1200W output power, our new subwoofer delivers a true and immersive experience. The subwoofer is also equipped with a class D amplifier, and EQ room regulation and can be placed randomly.

Our extensive listening tests are a crucial part of the manufacturing process before each speaker and electronic component is 'burned-in' and thoroughly measured for several days. M8 Series products advance to the final manufacturing stage only if the measurements show no deviation.

CINEMA
SERIES

M6 Speakers

Slim as our motto!

Following a similar concept to our M8 Series, the new M6 Series can be mounted on, or flush to the wall. UandKSound has recently designed an extra slim cabinet for utilisation in complex custom installations.

Our main innovation to deliver the best sound is the introduction of our legacy Air Motion tweeter. More precise and clean high frequencies are achievable, such that the M6 Series has an unprecedented sense of commitment with its acoustic performance and aesthetic design. Naturally, the technical reliability and value are beholding of our normal standards. Constantly improving even its most innovative designs, UandKSound builds evolution into every product, investing the effort to satisfy even the most discerning customer. That being so, the M6 Series only offers the latest in audio technology for long term enjoyment.

M6 Series speakers are easily integrated into daily life. Their full enjoyment will not require complex installation and, whether watching a movie, or listening to your favourite artist, M6 Series speakers bring an experience without issue or compromise, thanks to best value for money features.

CINEMA SERIES S Speakers

The pinnacle of high-performance audio

Key to their sophisticated sound is an advanced crossover network. Each loudspeaker crossover is built with the highest-quality components. Internals including massive air-core coils, thick, high-purity copper wire, and low-distortion capacitors ensure that every nuance of the audio signal is preserved.

Designed to excel in a wide variety of sound reinforcement applications, the full range S Series are compact wall mount loudspeakers that provide inspiring acoustic performance with exceptional clarity and articulation. Manufactured to the highest standards of quality, these products are available through authorised specialty custom installation specialists and carry the full UandKSound warranty.

Critical to architectural projects is their ease of installation. The S Series continues the UandKSound tradition of innovative engineering solutions which allow custom integrators to install their products quickly and easily. Each model features a premium MDF enclosure and an extremely robust mounting-lock system that couples with the speaker's rigid chassis when installed. S series models allow installers to complete horizontal or vertical installation.

The standard finish for this product is matte black.

HOME SERIES

M5 Speakers

Beautiful design is the meaning of perfection

There is no greater comfort than sitting on the sofa to watch a movie or listen to music in the most relaxing environment. We are constantly working to provide the best listening experience and create the same feeling of a live musical or film performance.

UandKSound knows the importance of feeling good at home surrounded by a pleasant environment where everything maintains an aesthetic coherence. We have always been keen to design products with a dual purpose, functionality, and aesthetic appeal.

Fashions change and adapting to them is very important. For this reason, we developed the new M5 series, an evolution of the successful M3, but adapted to more discerning domestic environments where, not only aesthetics prevails, but an avantgarde sound reproduces high-resolution audio from the best films and music recordings. M5 Series speakers are engineered with great care to incorporate their visual presence in your interior.

The result is a refined entertainment experience without disrupting the beauty of your surroundings. All our products and components are proudly designed in Europe and our skilled and well-trained engineers test every component carefully.

Audiophile Performance

The new internal components for the M5 series include an improved crossover that provides excellent linear response through a high-density structured cabinet to get an outstanding dynamic range, especially for home theatre applications. Our renowned Air Motion ribbon tweeter is already implemented in many of our loudspeakers like the M5 series. A more defined response and extended high frequency is only achieved with the most advanced components.

The interior structure of M5 Series speakers has been developed in such a way that parallel surfaces are avoided to achieve a better sound diffraction, thus offering less distortion with high sound pressure levels.

The M5 Series family consists of front, centre, and surround channels, also, a dedicated active subwoofer. Making this family of products the perfect complement of loudspeakers, you get to enjoy the best sound at home without the need for complex installations. Our timeless design experience will be the best guarantee for you to enjoy sound in harmony without disruption to your home decoration for a long time.

HOME SERIES

M3 Speakers

Enjoyment for all the family

Modern, concise, and truly integrated and styled for your family living room. Experience the true cinematic effect. Their cabinet, heavy and rigid, provides excellent inertia to minimise vibration.

In terms of audio performance UandKSound loudspeakers have coherence between the different timbres as well as a consistent reproduction of the different registers without undue emphasis on bass, midrange or treble. The M3 Series loudspeakers are balanced, well-defined and dynamic.

Our intention is to bring to your home the maximum enjoyment of the art in its fullest measure. Each UandKSound design has been developed with one goal in mind: to offer the highest harmony inside your home environment as well as transmitting

the purest audio fidelity. The M3 Series loudspeakers are designed to offer impeccable audio performance while integrating harmoniously into your home decor. For even more depth, they can be combined with the M800II subwoofer.

At the conclusion of our manufacturing process, skilled, well-trained ears test each component to ensure that everything is up to UandKSound standards. As a result, our affordable M3 Series can revive your lost emotions without leaving your home.

HOME SERIES i Speakers

All in one !

Innovation is in continuous progress because of new fashions. iOS and Android devices are very present in our lives, at the same time as our favourite music. UandKSound has developed the new iSeries Bluetooth loudspeakers to allow the listening of music via the easiest and most enjoyable manner. The i5 Series shares the same technology as the i6 Series, our most powerful unit, whilst maintaining a similar design in a smaller cabinet, without compromising the best bass response and reliable wireless transmission. Meanwhile, Bluetooth technology offers an easy integration fulfilling the wireless standard.

If you are looking for the best value for money option, the ultimate stylish design and most impressive sound performance i5 and i6 Series Bluetooth loudspeakers are the best choice. Simplicity and reliability will delight your entire family.

UandKSound iSeries Bluetooth loudspeakers integrate a dedicated remote control to control its functions and select different audio inputs. Now you can share the music on your mobile phone as well as other personal devices and enjoy your music out loud, with family and friends, in every room of your house.

Outdoor Speakers

CUSTOM SERIES E Speakers

The sound of invisibility

Our new E Series features allow UandKSound a fresh standard in acoustic performance for in-wall and in-ceiling applications.

Designed for those seeking the world's most articulate and dynamic multi-channel home theatre systems, or simply a stealthy 2-channel system, the E Series speakers are voice and timbre matched with one another, as well as the rest of the UandKSound products.

All models feature an ultra-low profile, micro perforated grille, which are also paintable for a near invisible integration into any wall or ceiling and firmly attach via neodymium magnets. E Series also include extra wide threaded screws for quick dog leg fastening. The magnetic system secures grilles easily into place, reducing the risk of warping or damage during installation.

Some of the key features include our Smooth Visual Flangeless System, PRX™ Poly Resin CrossPoint Molds, PRX™ dog legs, Never Rust™ grilles firmly attached with neodymium magnets and extra wide threaded screws for quick installation and push gold plated binding posts.

CUSTOM
SERIES

Outdoor Speakers

Optimised for installation

UandKSound outdoor loudspeakers have been designed to blend into outdoor environments. Available in white/black or green finishes the look of these loudspeakers will complement landscaping designs and blend into their surroundings. Each loudspeaker cabinet houses two drivers set at precise angles, so you experience consistent stereo effects as you move around outdoors. Once mounted, the loudspeaker can be easily pivoted to direct the sound where you want it, and they will stay where you position them and not droop or slip over time.

Our loudspeakers utilise a durable weather-resistant construction that is built to withstand the harshest outdoor environments for a long time. Most discerning customers will appreciate the engineered construction for high-humidity ready to survive extreme temperatures while maintaining superior sound quality.

UandKSound loudspeakers feature internal wire connections to eliminate corrosion caused by moisture and to prevent damage from garden tools. Moreover, UandKSound offers an associated balanced power amplifier VTA-240F II to get the best sound performance of each loudspeaker under the hardest environmental conditions.

You can enjoy clear, natural sound from an outside loudspeaker enclosure that easily mounts to walls, on your deck, in your garden, or around the pool area.

PRODUCT RANGE

M SERIES

M2300 | M7300
M4500D | M7300D

M SERIES

M2300 / M7300

Impressive is
an understatement!

M7300 category A amplifier line, having no crossover distortion, therefore the entire frequency range can be at very low level, especially at high frequency level. The sound quality of this unit is meticulously precise, especially the pure DC coupling, through the input of the amplifier and the design phase output. All these in combination will give you a real and live hearing experience.

The circuitry of both professional power amplifiers is fully balanced, and all components are chosen carefully throughout. The noise level can be as low as -105dB, up to a dynamic range of 120dB, therefore we can deem this a non-destructive amplified power amp. When in use, the audio signal in the speaker can hardly be heard.

Each channel is equipped with a separate transformer and power supply circuit, ensuring a high degree of separation, avoiding any crosstalk between respective channels throughout the frequency range, even up to or more than 80dB.

String sound level is also lower than most general background noise amplifiers. Regardless the cost of construction, we deemed it imperative to eliminate the problem of any multi-channel ground loop noise arising from the exchange section so that the users can experience the real audio effects.

With exceptional clarity and dynamics, the M7300 and M2300 Series can create a huge soundstage that is almost holographic in its width and depth. From the most intimate acoustic recording to full-scale orchestral works, the performance is perfectly placed and never feels limited.

Combine our multichannel power amplifier with the M2300 Series and you will get an awesome combination ready to set up any complex home theatre configuration.

M SERIES

M4500D / M7300D

Effortlessly controls any loudspeaker

Our new class D power amplifiers represent the best in engineering ingenuity and available electronic components. With an extremely high damping factor and the ability to deliver huge currents the class D technology effortlessly controls any loudspeaker being the best partner for our flagship Reference Series. 750 watts for channel for M4500D and 300 watts for M7300D, with bridgeable option just for M4500D, guarantees the best sound performance of the market. Even loudspeakers with very low impedance are no match for the unflappable power supply of our power amplifiers.

Perfect for any setup

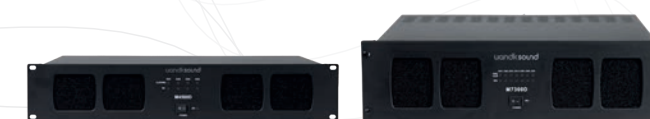

The M4500D power amplifier can function in a traditional stereo or multichannel setup because of the bridgeable option. If your connected device has a 12V trigger output, this can control the power state of the M4500D and M7300D, and even daisy-chain several M4500D or M7300D power amplifiers for complex installations.

Benefits of true digital amplification

M4500D and M7300D are not a typical Class D power amplifier. Our technology utilises a combination of high current output MOSFET's with Class D the efficiency. The units have very low distortion and an excellent signal to noise ratio, making them the perfect amplifier on the market.

UandKSound solution offers noiseless and clear replay at all sound levels. The digital signal drives the loudspeakers directly, with no translation and no middleman offering a digital to analogue conversion, virtually perfect for the most demanding audiophiles.

The result is a level of effortless power and advanced processing not available from any other manufacturer. You can be sure that our technology will deliver the most enjoyable and neutral sound you have ever experienced.

London Headphones

Feel the music soul!

UandKSound aims to redefine the world of Bluetooth headphones with the new LONDON ANC-HD200. Our headphones' drivers are carefully selected for clear and balanced audio whether you are in a quiet office or busy street. Moreover, our first-class ANC (double fed active noise cancellation) technology offers the most astonishing sound at any volume without distortion so you can focus on what really matters to you.

HiFi sound with rich bass and treble is achieved with the extended frequency response engineered by our team.

Our headphones' long battery life of up to 40 hours is very helpful if you are away from home for a long time. Additionally, the Bluetooth ON/OFF function allows you the connection of your LONDON ANC-HD200 headphones through the 3.5 mm audio input jack should you chose.

Also, the micro-USB charging port allows you to charge the headphones easily at any time where you want, moreover its built-in voice recognition technology offers the most reliable features.

LONDON ANC-HD200 headphones' memory foam earpads bring you the most comfortable experience while you are listening to music and are easily folded for storage in the carry bag included when not in use.

Enjoying your favourite music was never so pleasant.

SMART
SERIES

Oxford Earphones

Freedom without limitations!

Enjoying your favourite music never was so easy and simple.

UandKSound and its engineers have been working hard to achieve the best sound performance inherent of professional headphones to replicate that performance in earphones for domestic use.

One of the main features that highlights OXFORD ANC-HD100 earphones is the active noise cancellation system. A highly appreciated feature by those who use earphones in the street or noisy environments. UandKSound applies Stereo True Wireless technology to its new Smart Bluetooth Earphones, which allows the transfer of two stereo audio channels independently through the latest Bluetooth 5.1 generation system.

These earphones provide improved autonomy with up to seven hours' battery life and a travelling case which, in addition to transporting your earphones safely, also allows you to conveniently charge OXFORD ANC-HD100 earphones up to four times on the go. The fast charge feature helps extend battery life and provides up to 28 hours of use. Finally of note, is the touch control system that assures us the greatest comfort to enjoy the best sound experience by UandKSound.

NEW PRODUCTS FOR 2024

Bluetooth Series, i4 Series

i4 Connect and i4 Play are 100% digital loudspeakers that do not take up much space.

With two and four built-in amplifiers (respectively), Bluetooth 5.3 and the incredible UandKSound big sound, you do not need anything more. i4 Series uses the best Bluetooth 5.3 technology with a high-quality long-range receiver, so you will not experience dropouts in sound. The devices are built from wood and the drive units are custom designed to get the most accurate sound possible. i4 Series device technology consists of powerful digital amplifier units with built-in 32-bit floating point processors that deliver high quality sound in high resolution and without loss, a unique feature for loudspeakers in this category. There are no passive components in i4 Series, and the digital signal processing is free of noise and distortion providing music clarity with nuances not heard before.

Do not hesitate to contact your nearest dealer to get more information about the new i4 Play and i4 Connect.

Wireless Audio Systems, S4W Series

Setting up your own high quality cinema system without cables to the control unit is a reality! Also, the sound performance, design and quality components are the key elements to offering a successful product for the market. Floor stands for the loudspeaker's installation will be sold separately. More detailed information will be available on the UandKSound website very soon. New S4W Series will be available for 2024.

Lastly, an innovative and minimalistic stereo wireless system is under development to meet new needs of an emerging market.
